EDUCATION

NORTHEASTERN UNIVERSITY

Master of Science in Artificial Intelligence

May 2024

Boston, MA

DAYANANDA SAGAR COLLEGE OF ENGINEERING

Bachelor of Engineering in Computer Science

June 2022

Bangalore, India

SKILLS

Languages & Web: Python, SQL, Java, JavaScript (Node.js, React), C/C++, HTML/CSS

AI/ML: PyTorch, TensorFlow, Scikit-Learn, XGBoost, Hugging Face, NLTK, SpaCy, OpenCV

Cloud & DevOps: AWS, GCP(Google Cloud), Docker, Kubernetes, Git, CI/CD, FastAPI, Flask, Django

Data & MLOps: Apache Spark, Airflow, MLflow, Snowflake, Tableau, Matplotlib, Seaborn, Plotly

WORK EXPERIENCE

AFTERQUERY EXPERTS

March 2025 – Present

Software Engineer

San Francisco, CA

- Diagnosed 20+ critical bugs across Numpy, PyTorch, Pandas by navigating complex repos and implementing targeted patches.
- Constructed end-to-end test suites that increase code coverage from 68% to 92%, ensuring robust integration with CI pipelines.
- Orchestrated Dockerized environments to reduce onboarding time by 40%, enabling seamless cross-platform development.
- Collaborated with OSS maintainers to deliver high-impact features adopted across 3 core libraries with minimal regression.

HUMANITARIANS AI

September 2024 – Present

AI Engineer and Researcher

Boston, MA

- Boosted model training by 1.5× by reengineering ETL pipelines processing over 10TB of multimodal data using Spark and Pandas.
- Minimized batch processing delay from 3 hours to 10 minutes by deploying Kafka streams and Airflow-based orchestration.
- Automated data validation workflows that flagged 60% of edge-case labeling errors, reducing manual QA dependencies.
- Conducted large-scale hallucination benchmarking across 1M+ LLM outputs, guiding dataset refinement and tuning decisions.

IG GROUP

August 2021 – November 2021

ML Intern

Bangalore, India

- Reduced monthly fraud impact by ₹12L by applying XGBoost ensembles on high-frequency transactional datasets.
- Built a real-time trading insight engine parsing 500+ events/min, improving trader decision speed by 25%.
- Enhanced internal tool discoverability by 45% using custom transformer-based search optimization.
- Deployed automated Airflow DAGs for data refresh, saving 10 hours/week in manual pipeline management.

INDIAN SPACE RESEARCH ORGANIZATION(ISRO)

March 2021 – June 2021

Project Trainee

Bangalore, India

- Forecasted server overheating risks with ML models trained on 10 years of telemetry, ensuring zero downtime during missions.
- Designed a D3.js-based dashboard reducing EMS access time from 120s to under 30s across operational teams.
- Implemented a real-time alerting system in Node.js, accelerating incident response by 30% for remote monitoring.
- Partnered with systems engineers to embed predictive logic into legacy infrastructure without disrupting workflows.

PROJECTS

AUTOMATED STOCK FORECASTING PIPELINE WITH AWS AND AIRFLOW

- Predicted stock prices with 93% accuracy by training a CNN-LSTM model on historical data using AWS Glue and S3 pipelines.
- Eliminated 10+ hours/week of manual work by automating 8+ tasks with Apache Airflow and QuickSight dashboards.

BRAIN TUMOR CLASSIFICATION AND SEGMENTATION PIPELINE

- Processed 5K+ MRI scans to classify tumors with ResNet50 and segment regions using ResUNet with 98% pixel accuracy.
- Enhanced segmentation precision by optimizing Tversky loss and added visual interpretability using Grad-CAM heatmaps.

AI-POWERED DOCUMENT QUERY SYSTEM WITH VECTOR DATABASE INTEGRATION

- Designed an LLM-based semantic search tool using Dolphin-Mistral, GenAI embeddings, and Chroma across 1,200+ documents.
- Accelerated query speed from 3.5s to <1s by streamlining embedding pipelines and recursive text splitting in Streamlit.

MULTI-HOP REASONING AGENT FOR BUSINESS INTELLIGENCE

- Engineered a reasoning agent with Groq API + Ollama to analyze SQL, PDFs, and APIs in parallel using LLaMA 3-70B.
- Extracted insights across 4+ data streams by chaining LLM outputs into subqueries, reducing BI response time to <10s.
